

Tyre DOT Date Hot Brander Electric Heated Tire Branding Irons are used for old DOT date retreaded,which comes with customized branding die with your preferred new DOT date

Machine Description

Tyre DOT Date Hot Brander Electric Heated Tire Branding Irons

01: Application

Tyre DOT Date Hot Brander Electric Heated Tire Branding Irons apply to brand trademark, serial Number, and date etc on the tire, the heating block machined T-slop to select interchangeable characters to combine various branding arrangement, also inserted heating tube and thermostat to electrically heat and control heating temperature, clamping device can hold the tire with precision tuning to apply proper branding pressure, years of practical improvement increases its working performance,don't need special training operation, just following simple guidance to work out expected marking codes

02: Database

Name	Tyre DOT Date Hot Brander Electric Heated Tire Branding Irons	
Model	KLS-500	
Heating Power	500w	
Temperature	Within 500 degree	
Power Plug in	220v, 50hz or 110v/60hz Single phase	
Heating Block	Built-in Single Slotted in mounting side	
T-Slot Size	Within 2cm*10cm	
Temperature Control	Digital Thermal Setting Device	
Material	Heating Block	Molding Steel
	Branding Die	Copper
	Power Case	Aviation Aluminum
	Clamping Device	Molding Steel
Pressure Control	Precision Clamping Tuner	
Interchangeable Character	Sold Separately	
Net Weight	3.8kgs	

03: Character

Rugged construction for long life
Available power supply in 120v or 240v
Self-contained heating unit keep all digits hot
Sufficient heating power to reduce setting-up time
Double protective fuser of protective consideration for operator
Auto locking tongue to guarantee the consistent clamping force
Interchangeable character is sold separately with customized reads
Auto cutting off the power circuit design in case of overcurrent or short circuit
Built-in Clamping device with tuning screw to precision control the melting force
Slot in face of branding head for quick mounting interchangeable characters
Digital temperature controller and detector combined thermostat for precision heating
Water-proof structure of power box to improve the working performance in bad condition
Harden treatment of branding die to avoid corrosion and deformation in case of high temperature
Power box made of Aviation aluminum which is also insulation treated on its touching surface
The heating Block is made of machine steel which is precision built by machine of compute numerical control
